Enabling mobile staff to collect patient data quickly and easily “in the field” and share information with central Patient Management Systems (PMS) contributes to improved outcomes and assists in efficient resource management.

MKM FieldAssist™ uses low-cost Personal Data Assistant (PDA) technology to deliver practical valuable support to health professionals working in an Ambulatory Care setting. Utilising the PDA’s simple intuitive user interface, MKM FieldAssist™ delivers functions that include:

- downloading of client lists and contact information
- recording of patient contact details
- recording of clinical coding, notes and outcomes
- recording of travel time
- desktop or wireless synchronisation with the central server
- PDA password protection
- auditable synchronisation and transaction logs.

Through its own local server, MKM FieldAssist™ links and synchronises the PDA with the PMS to keep mobile and central systems aligned and up to date.

MKM FieldAssist™ has been initially deployed on the popular HP iPAQ PDA and Microsoft’s Windows Mobile® Operating system.

MKM FieldAssist™ has been proven with iSOFT’s leading PMS, i.PM, which is widely used in Australia, New Zealand and the United Kingdom.
